

ASSOCIATED LAUNDRY MANAGEMENT

GREEN INITIATIVE

As a part of our commitment to providing premier linen service in Northern Nevada, ALM incorporates a green initiative. ALM is committed to be stewards of our environment and resources.

Components of our Green Initiative:

- Installation of a Milnor Pulse Flow Tunnel Washing System that has reduced water usage to .3 gallons per pound of linen processed. Conventional washing systems can use 3 to 5 gallons per pound.
- ALM utilizes a Thermal Engineering of Arizona heat reclamation system to capture the heat from our drain water and use it to heat up the fresh water going into the wash cycle.
- Use the latest dryer technology to reduce natural gas usage.
- Shift work on non peak hours to reduce the load on the electric grid.
- Investment in new trucks to improve fuel consumption and emissions.
- Utilizing environmentally friendly chemicals.
- Whenever possible ALM utilizes local vendors to support our economy and reduce environmental impact.
- Investment in upgraded lighting throughout the facility as part of NV Energy's rebate program for energy efficient lighting.
